

NSCLC | TME feature attribution

PathoTME-FusionVal · 16-shot · predicted LUSC probability · five held-out folds

HiVE-MIL · CLIP-RN50 · α across folds: 0.25, 1.00, 0.75, 0.25, 1.00

Bars show mean absolute patient-level scores; SD describes the five fold means (sample SD).

FusionVal score = saved α $\times$ LR score; image prediction fixed. Separate x scales; no causal claim.
